## PROJECTS

---

**Movie Detail Site** github repo:<https://github.com/Pushkal-vashishtha/imdbClone-react>

A React-based project replicating IMDb's movie and TV show database. It features search functionality, detailed title pages, user reviews, authentication, advanced filtering, actor/director profiles, admin panel, and responsive design. APIs like TMDb and tools like Redux and Firebase can be utilized. ([Try it here](#))

**YouTube Clone** github repo: <https://github.com/Pushkal-vashishtha/youTube-clone>

A React-based project aiming to recreate the functionality of YouTube. It includes features like video search, playback, user authentication, subscriptions, comments, likes/dislikes, and responsive design. APIs like YouTube Data API can be used, and tools like Redux and Firebase can enhance functionality.([Try it here](#))

**Map Like Android App** github repo:[https://github.com/Pushkal-vashishtha/Google\\_Map\\_Android\\_Clone](https://github.com/Pushkal-vashishtha/Google_Map_Android_Clone)

Developing a Google Maps clone on Android Studio using Java calling the Google MAP API, entails crafting a mobile app with mapping, search, routing, and location features. Utilizing Google Maps API, users can interact with a familiar map interface, drop markers, plan routes, and explore locations, offering a comprehensive navigation experience similar to the original Google Maps app.

## ACHIEVEMENTS

---

- CODECHEF: 3 star 1605 (max) @pareshi\_1
- LEETCODE: Top 8.84% percent globally with 1789 (max) @puru\_730
